

Gearing up for REACH 2013 – easing the pressures for SMEs

▶ The campaign 'REACH 2013 – ACT Now!' has now been launched by the European Chemical Agency and chemical manufacturers. Importers and downstream users now have to start preparing for the deadline. And time is ticking, says Malcolm Carroll.

▶ La campagne « REACH 2013 - ACT Now! » a maintenant été lancée par l'ECHA (Agence européenne des produits chimiques) et par les fabricants de produits chimiques. Les importateurs et utilisateurs en aval doivent commencer à se préparer pour la date butoir. Et le temps est compté, d'après Malcolm Carroll.

▶ Die Kampagne 'REACH 2013 – ACT Now!' wurde von der ECHA (European Chemical Agency) und Chemieproduzenten ins Leben gerufen. Importeure und nachgeschaltete Anwender müssen sich auf die Frist vorbereiten. Und die Uhr tickt, so Malcolm Carroll.

REACH – the Registration, Evaluation, Authorisation and restriction of Chemicals and aimed at promoting the safer use of chemicals - has now been in place for five years and several important milestones in its implementation have already passed.

Almost a year has flown by since we saw the first phase of registration completed successfully, with manufacturers, importers and distributors of over 1000 tonnes of chemicals

a year registering their chemicals with the European Chemical Agency (ECHA). Since that time, the chemical industry has shifted its focus onto the next REACH landmark – REACH 2013 registration.

At the European Commission's REACH Registration conference in September a new campaign - REACH 2013 – ACT Now! was launched by the ECHA. The goal of the campaign is to ensure that chemical manufacturers, importers and downstream users to start preparing for the 31 May 2013

REACH registration deadline now. By this date, all phase-in substances manufactured or imported in the EU above 100 tonnes a year will need to be registered under REACH.

One of the notable factors about the 2013 registration is that a far greater number of small-to-medium enterprises (SMEs) will be affected. As the first registration phase focused on substances produced or imported in high volumes, smaller companies have not been as involved in the REACH process as some of the larger companies. However, this is about to change. SMEs will have to become more involved in REACH and most will have little experience of the REACH process. Most likely, they will also have less budget and fewer resources to handle the complexities and administrative challenges involved.

The challenges ahead for SMEs are widely acknowledged within the industry. Cefig's Executive Director, Hubert Mandery has stated that whilst the industry wants to make REACH work, the legislation is complex and also acknowledged that companies are doing their utmost to comply and prepare to co-operate.

Safety data sheets

As we all know the main purpose of REACH is to promote the safer use of chemicals and protect people who handle chemicals, as well as the environment. The registration process is of course a big step towards achieving this. But one of the other significant tools used by the industry to ensure safety levels, are the Safety data sheets (SDS) that are distributed to customers at the time of shipment of chemicals. SDSs contain important information about chemical properties, as well as how they should be stored and handled. The level of information required by REACH to appear on the SDS has been extended so that the SDS and associated Exposure Scenarios (ES) can now be quite sizeable documents. And there are expectations for a large increase in the actual number of SDS and ES documents entering the supply chain as a result of both 2010 and 2013 stages of legislation.

Under REACH, there are also some big changes required concerning the way in which SDSs need to be sent to customers and then used within companies - such changes will impact any company preparing for registration in 2013.

To achieve REACH compliance any company importing and distributing chemicals to and within the EU will need to ensure the direct delivery of SDS and associated documentation to customers. They will also be responsible for keeping these documents and their customers up to date.

Fig. 2. The goal of the campaign is to ensure that chemical manufacturers, importers and downstream users to start preparing for the 31 May 2013 REACH registration deadline.

This is a big change. Traditional methods of sending SDSs by either email or post won't be considered robust enough to stand up to regulatory scrutiny. Email does not guarantee or record proof of delivery and does not monitor the status and confirm http://www.reachdelivery.com/why_reach_delivery.html successful delivery of the Safety Data Sheets. Post has the same problems as emails and both incur significant time and costs in administration and management. And there are no audit capabilities, sufficient to demonstrate compliance or to provide protection in the event of legal action.

One solution being adopted by an increasing number of companies, is to automate the entire SDS delivery process using REACH Delivery, a new industry-wide SDS delivery service. This secure online service enables the electronic delivery, receipt, control, update, audit and tracking of SDSs in line with REACH. It automates the entire SDS delivery process including the monitoring, tracking and reporting on all documents that are sent to customers and provides a delivery status for auditing purposes.

If there are any changes or clarifications to the SDS, then the new version is sent to customers and it replaces the previous version automatically.

Organisations who use the system won't have to then worry about out of date versions being in circulation and managers can rest assured that all employees are using the most up to date SDSs at all times.

Electronic database

The system also stores all documents in an electronic database, allowing users a single consistent point of access for the latest version of a SDS. It is also cost effective. Companies can use REACH Delivery free of charge by registering for a Free (low use) account and upgrade to the paid service at any point when their volumes increase. The service operates on a 'many-to-many' basis, allowing companies, no matter where they are located, to be able to manage and automate the sending and receiving of SDS, and other documents and messages, within a fully secure and audited environment. It is international and multi-lingual as well as being easy to use.

As REACH affects companies throughout the world and similar legislation is now being considered in other countries, most significantly in the USA, the system has designed to meet the requirements of new international legislation as and when it is required.

REACH compliance is a hugely complex issue for companies - particularly the smaller companies now gearing up for 2013 registration. However, automating the sending of SDSs in line with REACH ahead of time will get one of the big compliance challenges out of the way. Companies who act now and automate their SDSs processes will be able to focus on gearing up for registration. □
